(Whitepaper)

First mooncoin on Cardano blockchain

www.cardanomoon.io

INTRODUCTION

ADAMOON Token is the first mooncoin and one of the very first meme coins on Cardano blockchain. Started as a joke of two crypto enthusiasts, ADAMOON Token quickly started growing and gaining attention. Token is minted in low supply and majority of tokens will be owned by HODLers.

SPECIFICATIONS

ADAMOON Token is native asset on Cardano blockchain and it needs to have around 1.5~~Å~~ (ADA) locked to it, because there is a protocol parameter on blockchain that prevents malicious growth of the UTXO set. Unfortunately it is not possible to create an UTXO just with native assets.

Token policy:

(policy will be locked on 2021-12-15 13:02:43 UTC)

TOKENOMICS

Overall supply of ADAMOON Token is 1.000.000.000. We will also have collectible CNFTs with 5% royalties. All these funds will go to the community and also for further project development.

TOKEN DISTRIBUTION

TOTAL SUPPLY	1.000.000.000
AVAILABLE TO BUY	700.000.000
COMMUNITY FUNDS	200.000.000
DEVELOPERS FUNDS	100.000.000

TOKEN VALUE

ADAMOON Token is a so-called meme coin and there is no real value behind it (like back up in gold or fiat currency, etc.). Value of this token is its community and also there is a potential of historical value as well.

ROADMAP

Phase 1

- Project initiation
- Building social media presence
- Building community
- Giveaways
- Token sale

Phase 2

- CNFT sales & auctions
- Listing on DEXes & Swaps
- Listing on tracking sites

OUR VISION

For further development there are many possibilities. We have many ideas and also we expect the community will want to participate in further development so there might be some ideas and suggestions from them as well. Moon is the limit!
